EDUCATIONAL PROGRAM

Discipline "Jurisprudence"

Specialty: 31.05.01 General Medicine

Course: 2

Semester: 3

Total hours: 108 hrs.

Total credits: 3 credit units

Control form: credit-test, 3 semester

Blagoveshchensk, 2025

The educational program of the discipline is designed in accordance with the requirements of the Federal State Educational Standard of Higher Education - specialist in specialty 31.05.01 General Medicine, approved by the order of the Ministry of Education and Science of Russia dated 08.12.2020 No. 988 (registered with the Ministry of Justice of Russia on 08.26.2020 No. 59493), BPEP HE (2021).

Author:

Associate Professor at the Department of Philosophy, History of Fatherland and Foreign Languages, Ph.D. of Juridical Sciences, E.N. Maslova

Reviewers:

Head of the Department of Physiology and Pathophysiology of the FSBEI HE Amur SMA, Holder of an Advanced Doctorate in Biological Sciences, Ph.D. of Chemical Sciences, Docent, T.A. Batalova

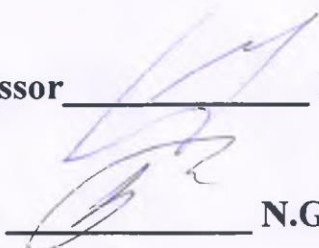

Head of the Department of Religious Studies and History, FSBEI HE "Amur State University", Holder of an Advanced Doctorate (Doctor of Sciences) in Philosophical Sciences, Professor A.P. Zabiako

APPROVED at the meeting of the Department of Philosophy, History of Fatherland and Foreign Languages
Protocol No. 7, dated March 21, 2025

Head of Department, Docent
Ph.D. of Philosophical Sciences  V.S. Matyushchenko

Conclusion of the Expert Commission on the review of the Educational Programs:
Protocol No. 7, dated March 21, 2025

Expert of the expert commission  T.V. Gerasimova

APPROVED at the meeting of the CMC No. 8:
Protocol No. 7, dated March 21, 2025
Chairman of the CMC No. 8
Ph.D. of Engineering Sciences, Associate Professor  D.B. Pekov

AGREED: Dean of the Faculty of Medicine,
Ph.D. of Medical Sciences, Associate Professor  N.G. Brush

I. EXPLANATORY NOTE

1.1. Characteristics of the discipline

Knowledge of the law and strict adherence to legal norms governing medical activity are extremely important and necessary in the activities of a doctor. It is necessary to begin to form a baggage of such knowledge while still in college. Today, attending physicians must have a sufficient level of knowledge of the norms of the legislation in force in healthcare, must, through understanding legislative and regulatory acts, see the features of the development of public health protection and the healthcare system, both at the federal level and at the level of the constituent entities of the Russian Federation. Knowledge of the legal foundations of professional activity, the rights and responsibilities of both the doctor and the patient, issues of their social and legal protection is very important in the interaction "doctor-patient".

The features of studying the discipline "Jurisprudence" are: the interdependence between the goals of legal and medical education; the universality and fundamental nature of the course; the peculiarity of constructing their content depending on the nature and general goals of training a doctor and his specialization.

1.2. Purpose and objectives of the discipline.

The purpose of teaching the discipline:

- developing in future doctors the necessary level of theoretical knowledge about the basic definitions and provisions of legal science, as well as the necessary skills of lawful behavior in the implementation of professional activities and in everyday life;
- legal education, raising the level of legal awareness and legal culture.

Learning objectives of the discipline:

- teaching students theoretical knowledge about the principles of law, legal institutions, categories and the current level of development of legal science;
- teaching students the basic principles of various branches of Russian law;
- teaching students the basic provisions of Russian legislation in the field of healthcare;
- teaching students to interpret and apply legal norms of various branches of law to specific legally significant facts;
- teaching students correct legal orientation in the current legislation on healthcare in the Russian Federation and its adequate application in specific practical situations;
- familiarizing students with regulatory systems for regulating relations in the field of health care in light of the national project "Health";
- familiarization of students with legal issues of medical insurance in the provision of medical care (services) with an emphasis on the primary (outpatient) link of domestic healthcare, legal regulation in the field of medical insurance;
- familiarizing students with the rights of citizens, individual groups of the population and patients to health protection, guarantees for the implementation of medical and social assistance;
- familiarizing students with the rights and responsibilities of medical workers in medical and preventive institutions, various structures of the healthcare system, the principles and provisions of their social and legal protection, legal liability for offenses in the course of professional activities;
- developing in students a respectful attitude towards the rights of patients and the responsibility of doctors for causing harm to health, for professional and professional-official violations;
- familiarizing students with the principles and provisions of International Medical Law in accordance with ethical, moral and religious standards;
- to foster in students a respectful attitude towards laws and other regulatory legal acts as a fundamental guarantor of the observance of the rights, freedoms and interests of citizens and society.

1.3. The place of the discipline in the structure of the OPOEP of HE

In accordance with the Federal State Educational Standard of Higher Education - specialist in specialty 31.05.01 General Medicine (2020), the discipline "Jurisprudence" refers to the disciplines of the basic part, Block 1. The total workload is 3 credits (108 hours), taught in the 3rd semester of the 2nd year. Control form - credit.

Students are taught on the basis of continuity of knowledge and skills acquired in the school course of social studies. To master the discipline "Jurisprudence", theoretical knowledge and skills in the disciplines "History", "Economics", "Biology" are necessary.

The discipline "Jurisprudence" is a subject necessary for studying specialized disciplines that are taught in parallel with this subject or in subsequent courses. Mastering the discipline "Jurisprudence" should precede the study of: bioethics, normal physiology, pathophysiology, clinical pathophysiology; biochemistry; histology, embryology, cytology; hygiene; microbiology and virology; public health and healthcare; neurology; otolaryngology; ophthalmology, radiation diagnostics and radiation therapy; infectious diseases and other clinical disciplines.

The discipline "Jurisprudence" consists of 2 modules, which present the most important and necessary information that determines the educational process:

Module 1: Jurisprudence.

Module 2: Medical Law.

1.4 Requirements for students

To study the discipline "Jurisprudence", a student must have the necessary knowledge, skills and abilities developed in institutions of secondary (complete) general education:

Story
Knowledge : the essence, forms and functions of historical knowledge; methods and sources of studying national history; basic concepts of the development of the world historical process; general patterns and national characteristics of the formation and development of the Russian state and society; the most important events and phenomena, names of historical figures who determined the course of national and world history.
Skills: analyze historical processes based on scientific methodology; have a basic understanding of historical thinking; express and justify one's position with historical facts regarding the dynamics of socio-political processes in Russia; systematize historical facts and formulate reasoned conclusions, including from the history of the development of science and technology (in particular, in one's specialty); extract knowledge from historical sources and apply them to solve cognitive problems.
Skills: analyze historical processes based on scientific methodology; have a basic understanding of historical thinking; express and justify one's position with historical facts regarding the dynamics of socio-political processes in Russia; systematize historical facts and formulate reasoned conclusions, including from the history of the development of science and technology (in particular, in one's specialty); extract knowledge from historical sources and apply them to solve cognitive problems.
Economy
Knowledge: basic economic categories, laws and methods of economic science; basic economic problems of the market model of the economy; macroeconomic indicators of economic activity of the national economy; market mechanism of management; fundamentals of management and marketing; methods for assessing the effectiveness of the economic activity of an organization.
Skills : independently analyze and evaluate the economic situation in Russia and abroad, carry out their activities taking into account the results of this analysis; apply methods of economic science

when analyzing specific economic situations at the micro and macro levels; independently conduct a comparative analysis of macroeconomic indicators; independently evaluate the results of the economic activity of the organization; make rational management decisions taking into account the needs of consumers of medical services and the competitive situation; use educational, scientific, popular science literature, the Internet to solve healthcare problems in the sphere of economic activity of a medical organization.

Skills: expressing an independent point of view on various economic issues, analysis and logical thinking, conducting discussions, round tables, public speaking, economic argumentation; methods of analyzing specific economic situations; written argumentation for presenting one's own point of view; argumentation for solving problematic economic issues in the practice of economic activity of a medical organization; principles of effective management of economic activity of a medical organization; basic technologies for transforming economic information: text, spreadsheet editors, Internet search; methods of applying the principles and concepts of management and marketing when making management decisions .

Biology

Knowledge: the nature of biological processes, the most important substances involved in the structure and activity of a living organism.

Skills : traces the connection between biological and physical processes occurring in nature and living organisms.

Skills: searching for necessary information on the physical and biological role of substances using reference and legal systems.

1.5 Interdisciplinary links with subsequent disciplines

Knowledge, skills and abilities necessary for studying subsequent disciplines:

No. p/p	Name of subsequent disciplines	Numbers of discipline modules required for studying subsequent disciplines	
		1	2
1	Biochemistry	+	+
2	Normal Physiology	+	+
3	Pathophysiology, clinical pathophysiology	+	+
4	Pharmacology	+	-
5	Hygiene	+	-

14	Public Health and Healthcare	+	+
15	Infectious diseases	+	+
16	Bioethics	+	+

1. 6 Requirements for the results of mastering the discipline

The study of the discipline "Jurisprudence" is aimed at the formation of the following competencies: universal (UK), general professional (OPK)

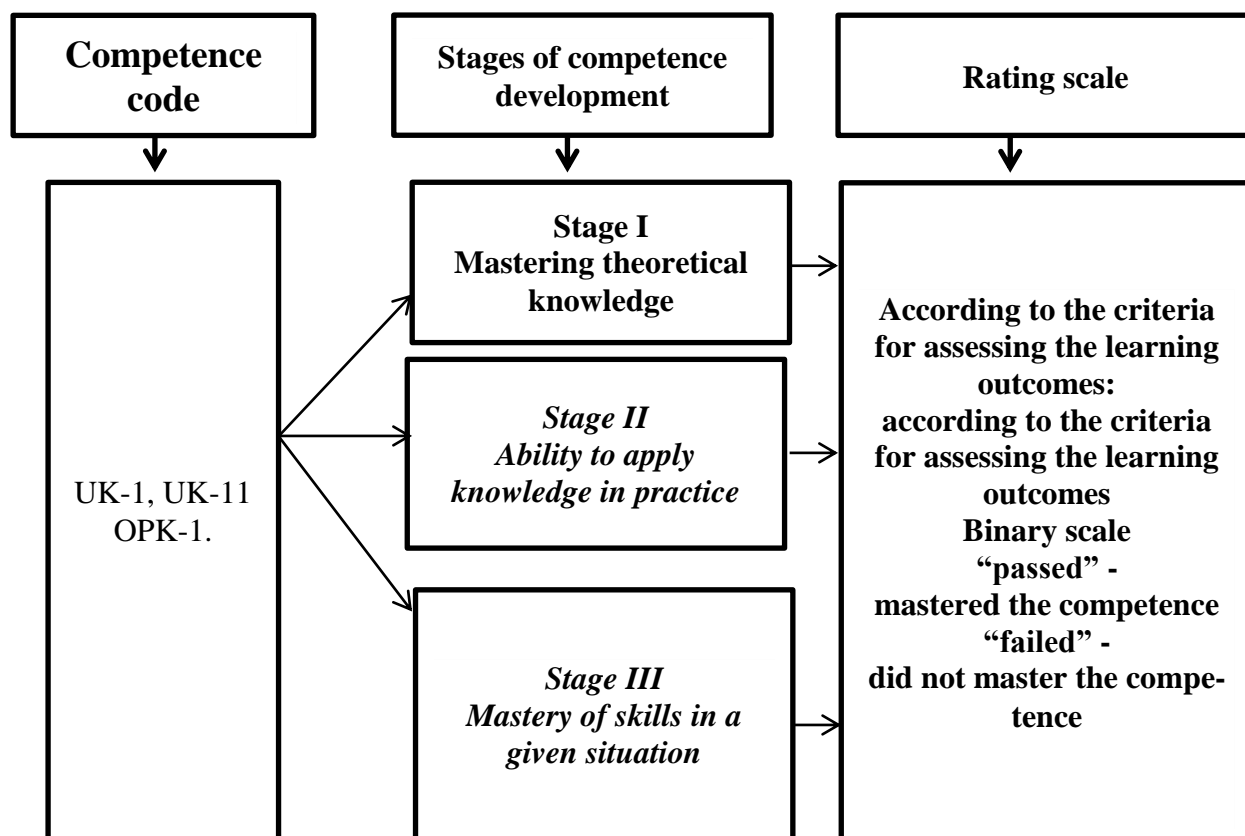

No. p/p	Code and name of competence	Code and the name of the indicator of achievement of competence
		Universal competencies
1	UK-1 Capable realize critical analysis of problematic situations based on a systems approach, to develop strategy of action	ID UK-1.1. Analyzes problem situation as a system, identifying its components and the connections between them. ID UK-1.2. Identifies gaps in information needed to solve problem situations and designs processes to eliminate them . ID UK-1.3. Applies systems analysis to resolve problematic situations in professional work sphere. ID UK-1.4 . Uses logical and methodological tools for critical evaluation of modern concepts of a philosophical and social nature in his subject area. ID UK-1.5 . Critically evaluates the reliability of information sources, works with conflicting information from different sources.
		General professional competencies
3	OPK-1 . Able to implement	ID OPK-1.1. Carries out professional activities in accordance with ethical standards and moral principles.

	moral and legal norms, ethical and deontological principles in professional activities.	<p>ID OPK-1.2. Organizes professional activities, guided by legislation in the field of healthcare, knowledge of medical ethics and deontology.</p> <p>ID OPK-1.3. Has the skills of presenting an independent point of view, analysis and logical thinking, public speaking, moral and ethical argumentation, conducting discussions and round tables, principles of medical deontology and medical ethics.</p>

Modules of the discipline and the code of the competence being formed

Item No.	Section name	Code of the competence being formed
1	Jurisprudence.	UK-1, UK-11 OPK-1.
2	Medical law.	UK-1, UK-11 OPK-1.

1.7 Stages of competence development and assessment scale

1.8 Forms of organization of students' training

Form of organization of students' training	Brief characteristic
Lectures	Lecture material contains Key And most problematic questions disciplines , the most significant V preparation specialist .
Practical classes	Intended For analysis (consolidation) of theoretical provisions And control over their assimilation With subsequent application received knowledge V in the course study of the topic.
Interactive forms of education	<ul style="list-style-type: none"> - solution situational tasks and exercises followed by discussion , - interactive survey; - execution creative tasks , - small group method, - discussions, - online course of the discipline in the Moodle system ,

	<ul style="list-style-type: none"> - testing in the Moodle system .
Participation in the department's research work, student circle and conferences	<ul style="list-style-type: none"> - Preparation oral messages and poster presentations for speeches at a student club or scientific conference; - writing theses and abstracts on the chosen scientific field; - preparation of a literature review using educational, scientific, reference literature and Internet sources .
Types of control	Brief description
Incoming inspection	<p>Testing theoretical knowledge and practical skills developed by the social studies program in secondary (complete) general education institutions. The entrance knowledge control includes:</p> <ul style="list-style-type: none"> - testing in the Moodle system (test of incoming knowledge control). The results of the incoming inspection are systematized, analyzed and used by the teaching staff of the department to develop measures to improve and update the teaching methods of the discipline.
Current control	<p>Current knowledge control includes:</p> <ul style="list-style-type: none"> - checking the solution of situational problems and exercises completed independently (extracurricular independent work); - assessment of the assimilation of theoretical material (oral survey and computer testing); - control over the technique of performing the experiment during practical classes and drawing up the protocol; - testing in the Moodle system on all topics of the discipline (tests include questions of a theoretical and practical nature); - individual assignments (practical and theoretical) for each topic of the discipline being studied.
Intermediate certification	<p>The midterm assessment is represented by a test, which students are renting out at the end of I semester a.</p> <p>The test includes the following stages:</p> <ul style="list-style-type: none"> - assessment of knowledge of theoretical material (oral survey and interview); - testing in the Moodle system (interim assessment test); - check of assimilation practical skills And skills; - solving situational problems and exercises on each topic of the discipline studied.

II . STRUCTURE AND CONTENT OF THE DISCIPLINE

2.1 Scope of the discipline and types of academic work

No. p/p	Types of educational work	Total hours	Semester 3
1	Lectures	20	20
2	Practical classes	52	52
3	Independent work of students	36	36
	Total labor intensity in hours	108	108
	Total workload in credit units	3	3

2.2 Thematic plan of lectures and their content

Item No.	Topics and content of lectures	Codes of formed competencies	Labor intensity (hours)
1	General theoretical issues of state and law. General theoretical issues of state and law. Concept, features and essence of the state. Forms of government, state structure, political regime of the state. Main features of the rule of law. Concept and essence of law. Correlation of legal norms and moral norms. Concept and types of sources of law. Structure of legal norm. Legal system. Legal relations. Legal facts and their classification. Concept and types of interpretation of legal norms. Legal consciousness and legal culture. Concept and types of legal liability. Legality and law and order	UK-1 UK-11 OPK-1	2
2	Fundamentals of Constitutional Law. Fundamentals of Constitutional Law. The Constitution is the Basic Law of the State. Legal status of an individual in the Russian Federation. Concept and essence of the Constitution. General characteristics of the Constitution of the Russian Federation of 1993. Legal properties of the Constitution. Types of constitutions. Fundamentals of the constitutional system of Russia. Man, personality, citizen: the relationship between concepts. Priority of human rights. The concept of the fundamentals of the legal status of an individual. Citizenship. Personal rights and freedoms. Political rights and freedoms of citizens. Socio-economic rights and freedoms. Guarantees for the implementation of rights and freedoms. Duties of citizens of the Russian Federation. Federal structure of the Russian Federation. The system of state power. Legal status of the subjects of the Russian Federation. Exclusive powers of federal authorities. The concept of state power and the principles of its organization in the Russian Federation. The system of state authorities in the Russian Federation.	UK-1 UK-11 OPK-1	2

	The President of the Russian Federation. The Federal Assembly of the Russian Federation. The Government of the Russian Federation. The judiciary.		
3	Fundamentals of civil law Civil law and legal relationship. Subject of civil law. Concept, features, Content and types of civil legal relations. Subjects of civil legal relations. Citizens (individuals) as subjects of civil legal relations. Legal entities. Grounds for the emergence and change of civil legal relations. Time limits in civil law. Concept, methods and limits of exercising civil rights. Protection of civil rights. Concept and calculation of time limits. Limitation period. Concept, types and forms of transactions. Invalidity of transactions.	UK-1 UK-11 OPK-1	4
4	Fundamentals of Labor Law Labor relations and other legal relations related to labor. Concept, content and types of labor contract. Terms and form of labor contract. Change and termination of labor contract. Concept of employment of the population. Unemployed citizens.	UK-1 UK-11 OPK-1	2
5	Fundamentals of family law. The concept of family law. The concept of family law. The procedure and conditions for concluding and dissolving marriage. The rights and obligations of spouses. The rights and obligations of parents and children. Legal protection of children. Alimony obligations. Forms of upbringing children left without parental care.	UK-1 UK-11 OPK-1	2
6	Fundamentals of criminal law. General characteristics of the criminal law of the Russian Federation. The concept and types of sources of criminal law of the Russian Federation. Criminal liability and its grounds. The concept of a crime. The concept, goals, and system of punishment under Russian criminal law. Primary and additional types of punishment. Assignment of punishment (general principles, circumstances mitigating or aggravating punishment). The concept of release from criminal liability and its role as a legal institution in Russian criminal law.	UK-1 UK-11 OPK-1	2
7	Fundamentals of administrative law. The concept of administrative law. Administrative-legal relationship. Administrative offense. Administrative responsibility. Executive authorities. Employees. Executive authorities and local governments as subjects of administrative-legal relations.	UK-1 UK-11 OPK-1	2
8	Medical law Medical law. Analytical review of the legislation of the Russian Federation on the protection of citizens'	UK-1 UK-11 OPK-1	4

	<p>health. Organizational and legal foundations of health care management. Medical law. Patients' rights and legal mechanisms for their protection. Social and legal protection of doctors and professional liability insurance.</p> <p>Types of criminally punishable acts of medical workers (causing death, serious harm to health, illegal abortion, failure to provide assistance to a patient, illegal placement in a psychiatric hospital, etc.). Criminal liability for medical error</p>		
Total hours			20

13	Credit lesson	3.25	Testing in Moodle system	90 min (61.5%)

2.5 Criteria for assessing students' learning outcomes

The assessment of learning outcomes is carried out in accordance with the "Regulations on the system for assessing the learning outcomes of students of the Federal State Budgetary Educational Institution of Higher Education Amur State Medical Academy of the Ministry of Health of Russia.

The basis for determining the level of knowledge, skills, and abilities are the assessment criteria - completeness and correctness:

- correct, precise answer;
- correct but incomplete or imprecise answer
- incorrect answer; no answer.

When assigning marks, the classification of errors and their quality are taken into account:

- gross errors;
- similar errors;
- minor errors; shortcomings.

The success of students in mastering the topics of the discipline "Physics, Mathematics" is determined by the quality of mastering knowledge, skills and practical abilities; the assessment is given on a five-point scale: "5" - excellent, "4" - good, "3" - satisfactory, "2" - unsatisfactory.

Evaluation criteria

Quality of development	Mark on a 5-point scale
90 - 100%	"5"
80 - 89%	"4"
70 - 79%	"3"
less than 70%	"2"

Incoming inspection

Conducted during the first lesson, includes: solving problems and exercises; testing in the Moodle system <https://educ-amursma.ru/course/view.php?id=868>

The test control includes questions on the physics course studied in secondary (complete) general education institutions.

Current control

Current control includes initial and final control of knowledge.

Initial control **is** carried out by the teacher at the beginning of each lesson in the form of a frontal survey, solving problems and exercises.

Final control – includes control over the technique of performing the experiment and drawing up the protocol, written work on the options, testing in the Moodle system

<https://educ-amursma.ru/course/view.php?id=868>

The final grade during the current knowledge assessment is given on the day of the lesson, as the arithmetic mean result for all types of activities provided for in the given lesson of the discipline's work program.

Criteria for assessing the oral response

- **“5” (excellent)** – the student demonstrates deep and complete knowledge of the educational material, does not allow inaccuracies or distortions of facts when presenting, presents the material in a logical sequence, is well oriented in the presented material, and can provide justification for the judgments expressed.
- **“4” (good)** - the student has mastered the educational material in full, is well oriented in the educational material, presents the material in a logical sequence, but makes inaccuracies when answering.
- **“3” (satisfactory)** – the student has mastered the basic principles of the topic of the practical lesson, but when presenting the educational material, he/she makes inaccuracies, presents it incompletely and inconsistently, requires leading questions from the teacher to present it, and has difficulty substantiating the judgments expressed.
- **“2” (unsatisfactory)** – the student has fragmented and unsystematic knowledge of the educational material, is unable to distinguish between the main and the secondary, makes mistakes in defining basic concepts, distorts their meaning, and cannot independently present the material.

Assessment criteria for the practical part

- **“5” (excellent)** – the student has fully mastered the practical skills and abilities provided for by the course work program.
- **“4” (good)** – the student has fully mastered the practical skills and abilities provided for in the course program, but makes some inaccuracies.
- **“3” (satisfactory)** – the student has only some practical skills and abilities.
- **“2” (unsatisfactory)** – the student demonstrates the performance of practical skills and abilities with gross errors.

Criteria for assessing independent extracurricular work:

- the level of student mastery of the educational material;
- the completeness and depth of general educational concepts, knowledge and skills on the topic being studied, to which this independent work relates;
- development of universal and general professional competencies (ability to apply theoretical knowledge in practice).
- the problems were solved correctly, the exercises were completed, and the test assignments were answered accurately – “passed”.
- Problems were not solved correctly, exercises were not completed correctly, test questions were not answered accurately – “failed”.

Essay evaluation criteria:

- **“5” (excellent)** – awarded to a student if he has prepared a complete, detailed, and formatted according to requirements, abstract on the chosen topic, presented his work in the form of a report with a computer presentation, and answered questions on the topic of the report;
- **“4” (good)** – awarded to a student for a complete, detailed essay that is formatted according to requirements, but poorly presented;
- **“3” (satisfactory)** – the abstract does not contain information on the issue being studied in full, is formatted with errors, and is poorly presented;
- **“2” (unsatisfactory)** – given to a student if the abstract is not written, or is written with gross errors, the report and computer presentation are not prepared, or their content does not correspond to the topic of the abstract.

Working off disciplinary debts.

1. If a student misses a class for a valid reason, he/she has the right to make it up and receive the maximum grade provided for by the course work program for that class. A valid reason must be documented.
2. If a student misses a class for an unjustified reason or receives a "2" mark for all activities in the class, he/she is required to make it up. In this case, the mark received for all activities is multiplied by 0.8.
3. If a student is excused from a class at the request of the dean's office (participation in sports, cultural and other events), then he is given a grade of "5" for this class, provided that he submits a report on the completion of mandatory extracurricular independent work on the topic of the missed class.

Criteria for assessing midterm assessment.

Midterm assessment (credit) is designed to assess the degree of achievement of planned learning outcomes upon completion of the study of a discipline and allows for an assessment of the level and quality of its mastery by students.

The students' success in mastering the discipline is assessed on a 5-point scale: “5” – excellent, “4” – good, “3” – satisfactory, “2” – unsatisfactory.

"Excellent" - for the depth and completeness of mastery of the content of the educational material, in which the student easily navigates, for the ability to connect theoretical questions with practical ones, express and justify their judgments, correctly and logically present the answer; when testing, allows up to 10% of erroneous answers. Practical skills and abilities provided for by the working program of the discipline are fully mastered.

"Good" - the student has fully mastered the educational material, is oriented in it, correctly states the answer, but the content and form have some inaccuracies; during testing allows up to 20% of erroneous answers. Completely practical skills and abilities provided by the working program of the discipline, but allows some inaccuracies

"Satisfactory" - the student has mastered the knowledge and understanding of the main provisions of the educational material, but presents it incompletely, inconsistently, does not know how to express and justify his/her judgments; during testing, allows up to 30% of erroneous answers. Has only some practical skills and abilities.

"Unsatisfactory" - the student has fragmented and unsystematic knowledge of the educational material, is unable to distinguish between the main and secondary, makes mistakes in defining concepts, distorts their meaning, presents the material in a disorderly and uncertain manner, and makes more than 30% of erroneous answers during testing. Performs practical skills and abilities with gross errors.

A student can claim to receive an "excellent" grade automatically if he/she has won a prize in disciplinary or interdisciplinary Olympiads (university, regional) and has an average grade for the current academic performance of at least 4.8 points. A student can refuse the "automatic" grade and take the test together with the group on a general basis.

Interim assessment is carried out through a system of passing a test in 3 stages:

Testing in the Moodle system (<https://educ-amursma.ru/course/view.php?id=868>).

1. Completion of the practical part of the discipline in full: involves attending all practical classes and completing assignments. Based on the assessments of the current control of knowledge, skills, and abilities in practical classes, the average score of current academic performance is calculated, which is recorded in the educational (electronic) journal. The average score of the current knowledge control is taken into account during the midterm assessment.
2. Delivery of practical skills (control of the level of development of competencies). Includes 10 options, containing 10 practical questions each.

Assessment criteria for midterm assessment

Stages	Mark out of 5 point scale	Binary scale
Test control in the system " Moodle "	3-5	passed
Complete completion of the practical part of the course	3-5	
Delivery of practical skills (control of the formation of competencies)	3-5	
Test control in the system " Moodle "	2	not credited
Complete completion of the practical part of the course	2	
Delivery of practical skills (control of the formation of competencies)	2	

2.6 Independent work of students: in-class and out-of-class.

The organization of independent classroom work of students is carried out with the help of methodological instructions for students, which contain educational goals, a list of the main theoretical questions for study, a list of practical work and the methodology for conducting it, instructions for the presentation of the results obtained, their discussion and conclusions, assignments for self-control with standard answers, a list of recommended literature.

From 1/4 to 1/2 of the practical lesson time is allocated for independent work of students: conducting research, recording results, discussing them, formulating conclusions, completing individual assignments. The preparatory stage, or the formation of an approximate basis for actions, begins for students outside of class time when preparing for the practical lesson, and ends in class.

All subsequent stages are carried out in class. The stage of materialized actions (solving problems using an algorithm or without an algorithm, with an unknown answer in advance) is carried out independently. The teacher, if necessary, provides consultation, provides assistance and simultaneously monitors the quality of students' knowledge and their ability to apply existing knowledge to solve assigned problems.

No. p/p	Topic practical lesson	Time for student preparation for the lesson	Forms of extracurricular independent work	
			Mandatory and the same for all students	At the student's choice (abstract on topics)

12	credit	2 hours	Preparation for theoretical issues	-
Labor intensity in hours		32 hours	32 hours	4 hours
Total labor intensity (in hours)			36 hours	

2.7 Project work

Project (research) work students (R&D) is a mandatory section of the discipline and is aimed at the comprehensive formation of universal and general professional competencies of students. R&D involves the study of specialized literature and other scientific and technical information on the achievements of domestic and foreign science and technology in the relevant field of knowledge, participation in scientific research, etc. The topics of R&D are determined by students independently or in consultation with the teacher.

List of recommended project work topics:

1. Medical confidentiality in legal aspect.
2. Medical duty and law.
3. Medical and legal aspects of alcoholism, drug addiction and prostitution.
4. Features of legal regulation of labor of medical workers.
5. Failure to provide medical care and abandonment in danger in medical practice: legal consequences.
6. Causing harm to health during diagnosis and treatment – legal consequences.
7. Medical crimes committed through negligence. Types of negligence, cause-and-effect relationship.
8. The concept of "Medical error".
9. The concept of "extreme necessity" as applied to medicine.
10. Experiment in medicine: legal aspects.
11. Refusal to treat a patient: documentation, consequences for the doctor and the patient. Providing medical care without the patient's consent.
12. Regressive claims of a medical institution against a doctor who caused harm to health.
13. Features of legal regulation of the provision of psychiatric care in Russia.
14. Death: medical and legal aspect.

Criteria for assessing students' project work:

- the material on the results of the research in the report is presented in detail, the specialized literature is well-developed, scientific and technical information on the achievements of domestic and foreign science and technology in the relevant field of knowledge is studied - "passed".
- the material on the results of the research in the report is not presented accurately enough, the special literature is poorly studied, the scientific and technical information on the achievements of domestic and foreign science and technology in the relevant field of knowledge is not studied - "failed".

III . EDUCATIONAL, METHODOLOGICAL AND INFORMATIONAL SUPPORT DISCIPLINES

3.3 Educational and methodological support for the discipline prepared by the department staff:

Electronic and digital technologies:

Online course on the subject "Jurisprudence" in the EIS FGBOU VO Amur State Medical Academy <https://educ-amursma.ru/course/view.php?id=868>

Characteristics of modules in electronic information and educational course

Educational	Controlling
Theoretical (lecture) material, scientific and educational films	Methodological recommendations for students on independent extracurricular work.
Methodological recommendations for students for practical classes. Methodological recommendations for solving problems and exercises on the topics of the discipline.	List of recommended topics for abstracts and guidelines for abstract design .
Reference material , tables of standard values.	Tests of entrance, current and final knowledge control.

1. Electronic teaching aids:

(placed in the Electronic Information System of the Federal State Budgetary Educational Institution of Higher Education Amur State Medical Academy. Access mode:

- <https://educ-amursma.ru/course/view.php?id=868>
- Electronic textbook on the subject " Jurisprudence ". Section " Jurisprudence ";
- Electronic textbook " Medical Law " on the subject "Jurisprudence " . Section " Medical Law ".

3.4 Equipment used for the educational process

No. p/p	Name	Quantity
1.	Classroom for conducting seminars (Law Study Room)	
	Board	1
	Teacher's desk	1
	Study table	14
	Chairs	26
	Visual aids (Posters)	15

3.5. Professional databases, information reference systems, electronic educational resources

Resource name	Resource Description	Access	Resource address
Electronic library systems			
"Student consultant. Electronic library of the medical university"	For students and teachers of medical and pharmaceutical universities. Provides access to electronic versions of textbooks, teaching aids and periodicals.	Remote access after registration under the university profile	https://www.studentlibrary.ru/
Reference and information system " MedBaseGeotar "	The reference and information system " MedBaseGeotar " is intended for practicing medical specialists, researchers, teachers, postgraduate students, residents, senior students, and healthcare managers for the rapid search, selection, and reading of medical literature necessary for work in a single data source.	Remote access after registration under the university profile	https://mbasegeotar.ru/pages/index.html
EBS « Bookup »	Large medical library - information and educational platform for the joint use of electronic educational, educational and methodological publications of medical universities of Russia and the CIS countries	Remote access after registration under the university profile	https://www.books-up.ru/
EBS "Lan"	Network electronic library of medical universities - an electronic database of educational and scientific works on medical topics, created for the purpose of implementing network forms of professional educational programs, open access to educational materials for partner universities	Remote access after registration under the university profile	https://e.lanbook.com/
Scientific electronic library " Cyber-Leninka "	CyberLeninka is a scientific electronic library built on the paradigm of open science (Open Science), the main objectives of which are the popularization of science and scientific activity, public control over the quality of scientific publications, the development of interdisciplinary research, a modern institute of scientific review, increasing the citation of Russian science and building a knowledge infrastructure. Contains more than 2.3 million scientific articles.	free access	https://cyberleninka.ru/
Oxford Medicine Online	A collection of Oxford medical publications, bringing together over 350 titles into a single, cross-searchable resource. Publications include The Oxford Handbook of Clinical Medicine and The Oxford Textbook of Medicine , the electronic versions of which are constantly updated.	free access	http://www.oxfordmedicine.com
Human Biology Knowledge Base	Reference information on physiology , cell biology , genetics , biochemistry , immunology , pathology . (Resource of the Institute of Molecular Genetics of the Russian Academy of Sciences .)	free access	http://humbio.ru/
Medical online library	Free reference books, encyclopedias, books, monographs, abstracts, English-language literature, tests.	free access	https://www.medlib.ru/library/library/books
Information systems			
Clinical Guidelines	A resource of the Russian Ministry of Health that con-	link to download	https://cr.minzdrav.gov.ru/#/

Rubricator	tains clinical recommendations developed and approved by medical professional non-profit organizations of the Russian Federation, as well as methodological guidelines, nomenclatures and other reference materials.	the application	
Federal Electronic Medical Library (FEMB)	The Federal Electronic Medical Library is part of the unified state information system in the field of healthcare as a reference system . FEMB was created on the basis of the funds of the Central Scientific Medical Library named after I.M. Sechenov.	free access	https://femb.ru/
Russian Medical Association	Professional Internet resource . Objective: to promote effective professional activity of medical personnel. Contains the charter, personnel, structure, rules of entry, information about the Russian Medical Union.	free access	http://www.rmass.ru/
Web -medicine	The site presents a catalog of professional medical resources, including links to the most authoritative subject sites, journals, societies, as well as useful documents and programs. The site is intended for doctors, students, employees of medical universities and scientific institutions.	free access	http://webmed.irkutsk.ru/
Databases			
World Health Organization	The site contains news, statistics on countries that are members of the World Health Organization, fact sheets, reports, WHO publications and much more.	free access	http://www.who.int/ru/
Ministry of Science and Higher Education of the Russian Federation	The website of the Ministry of Science and Higher Education of the Russian Federation contains news, newsletters, reports, publications and much more	free access	http://www.minobrnauki.gov.ru
Ministry of Education of the Russian Federation	The website of the Ministry of Education of the Russian Federation contains news, newsletters, reports, publications and much more	free access	https://edu.gov.ru/
Federal portal "Russian education"	A single window for access to educational resources. This portal provides access to textbooks on all areas of medicine and health care.	free access	http://www.edu.ru/
Polpred.com	Electronic library system Business media. Media Review	free access	https://polpred.com/news
Bibliographic databases			
Database "Russian Medicine"	It is created in the Central Scientific and Methodological Library and covers the entire collection, starting from 1988. The database contains bibliographic descriptions of articles from domestic journals and collections, dissertations and their abstracts, as well as domestic and foreign books, collections of institute proceedings, conference materials, etc. Thematically, the database covers all areas of medicine and related areas of biology, biophysics, biochemistry, psychology, etc.	free access	https://rucml.ru/
PubMed	A text database of medical and biological publications in English. The PubMed database is an electronic search engine with free access to 30 million publications from 4,800 indexed journals on medical topics. The database contains articles published from 1960 to the present day, including information from MEDLINE, PreMEDLINE , NLM. Each year, the portal is replenished with more than 500 thousand new works.	free access	https://pubmed.ncbi.nlm.nih.gov/
eLIBRARY.RU	Russian information portal in the field of science, technology, medicine and education, containing abstracts and full texts of more than 13 million scientific articles and publications. The eLIBRARY.RU platform provides electronic versions of more than 2,000 Russian scientific and technical journals, including more than 1,000 open access journals.	Full functionality of the site is available after registration	http://elibrary.ru/defaultx.asp

Electronic library of dissertations (RSL)	Currently, the Electronic Library of Dissertations of the Russian State Library contains more than 919,000 full texts of dissertations and abstracts.	free access	http://diss.rsl.ru/?menu=disscatalog/
Medline.ru	Medical and biological portal for specialists. Biomedical journal.	free access	https://journal.scbmt.ru/jour/index
Official Internet portal of legal information	The single official state information and legal resource in Russia	free access	http://pravo.gov.ru/

IV. ASSESSMENT TOOLS FUND

4.1. Current test control (input, initial, output), final.

4.1.1 Examples of test tasks for entrance control (with standard answers)

Test assignments are located in the Moodle system. Access mode:

<https://educ-amursma.ru/course/view.php?id=868>

(choose one correct answer)

1. OUTPATIENT CARE IS PROVIDED IN A MEDICAL INSTITUTION:

- 1) Stationary;
- 2) Hospital;
- 3) Departmental hospitals;
- 4) Polyclinic

2. SEVERE ALLERGIC REACTION OF THE PATIENT TO THE ADMINISTRATION OF THE DRUG SUBSTANCES:

- 1) Quincke's edema ;
- 2) Urticaria;
- 3) Anaphylactic shock;
- 4) Redness

3. TIME FACTOR FOR DETERMINING BIOLOGICAL DEATH:

- 1) 5-6 minutes of circulatory arrest + 30 minutes of ineffective resuscitation measures;
- 2) 15 minutes from circulatory arrest;
- 3) 120 minutes from circulatory arrest;
- 4) More than 45 minutes from circulatory arrest

Answer standards: 1-4; 2-3; 3-1.

4.1.2 Examples of test tasks for initial control (with standard answers)

Test assignments are located in the Moodle system . Access mode:

<https://educ-amursma.ru/course/view.php?id=868>

(choose one correct answer)

1. A RULE OF CONDUCT THAT HAS BEEN FORMED AS A RESULT OF ACTUAL APPLICATION OVER A LONG PERIOD OF TIME AND HAS BECOME A HABIT IS DESIGNATED BY THE CONCEPT:

- 1) morals;
- 2) custom;
- 3) tradition;
- 4) right

2. THE LAW NORMS ARE:

- 1) rules of conduct regulating relations between nations and social groups aimed at the conquest and use of the state apparatus;
- 2) rules of conduct that determine what is good and what is evil;

- 2) bears administrative responsibility
- 3) bears criminal liability
- 4) bears disciplinary responsibility

Answer standards: 1-2; 2-1; 3-2.

4.2 Situational tasks, exercises

Example No. 1. Citizen S., limited in legal capacity due to alcohol abuse, independently rented out his garage to citizen I., for which a contract was drawn up in simple written form. However, the transaction was subsequently deemed invalid.

Questions:

1. What are the fundamental grounds for the emergence of legal relations?
2. What is legal capacity?
3. What is legal capacity?
4. What is a legal fact?
5. Did legal relations arise in this situation?

Answer:

1. The grounds for the emergence of legal relations are: the existence of a legal norm regulating these legal relations, the legal capacity of the subjects of legal relations, and a legal fact.

2. Legal capacity is the ability (possibility) of a person to have rights and obligations provided for by regulatory legal acts.

3. Legal capacity is the ability of a person to independently, through his conscious actions, exercise his existing rights and fulfill the legal obligations imposed on him.

4. A legal fact is a specifically defined circumstance (action, event, state) that entails the emergence, change or termination of a legal relationship.

5. In this problem, legal relations between citizen S. and citizen I. did not arise, since one of the grounds for the emergence of legal relations is missing - the legal capacity of the subjects of legal relations (citizen S. was recognized by the court as having limited legal capacity under civil law, i.e. he can only make minor everyday transactions).

Example No. 2. A young couple, having decided to register their marriage, went to the registry office and filed the corresponding application. However, after some time it turned out that they had one common father and they were denied registration of the marriage.

Questions:

1. the registry office employees to refuse to register a marriage?
2. What other prohibitions on marriage are provided for by the Family Code of the Russian Federation?
3. Are there any legal consequences if such a marriage is concluded?
4. How are they expressed?
5. Where is the issue of recognizing a marriage as invalid decided?

Answer:

1. Yes, it is legal, since the girl and the young man are blood relatives.
2. Marriages are prohibited: between adoptive parents and adopted children; close relatives; with a person already in another marriage; with an incapacitated person due to mental illness.
3. Yes.
4. This marriage may be declared invalid.
5. The recognition of a marriage as invalid is carried out in court.

Example No. 3. A general practitioner was hired under an employment contract to work at a clinic. After five months of work, the doctor demanded that the clinic administration grant him an annual paid vacation, which was refused.

Questions:

1. Is the administration's refusal justified?
2. After what period of time and under what conditions does an employee have the right to use annual paid leave?
3. Under what conditions can annual paid leave be granted?
4. In what cases should annual paid leave be granted before the expiration of such time?
5. What types of vacations are listed in the Labor Code of the Russian Federation?

Answer:

1. Yes, it is legitimate.
2. In accordance with Article 122 of the Labor Code of the Russian Federation, an employee has the right to use annual paid leave after 6 months of continuous work for a given employer.
3. Annual paid leave may be granted by agreement of the parties.
4. Annual paid leave must be granted upon the employee's application before the expiration of 6 months: to women before maternity leave or immediately after it; to employees under the age of 18; to employees who have adopted a child under the age of 3 months and in other cases stipulated by federal laws.
5. Annual paid (basic, additional) leave without pay.

4.3 List of practical skills that a student should have after mastering the discipline.

1. To independently make legitimate decisions in a specific situation that arises during the implementation of the complex professional activities of a doctor;
2. Properly prepare medical documents, maintain primary medical records, prepare documents necessary for the exercise of the right to engage in medical activities;
3. To navigate the current regulatory and legal acts on labor, to apply labor legislation in specific practical situations;
4. Use and draw up regulatory and legal documents related to future professional activities;
5. Competently, based on legal norms, qualify circumstances arising in the course of professional activities;
6. Work with regulatory documentation;
7. To legally competently exercise one's civil and professional rights;
8. Possess the skills of expressing an independent point of view, analysis and logical thinking, public speaking, moral and ethical argumentation, conducting discussions and round tables, the principles of medical deontology and medical ethics;
9. Have the skills to inform patients and their relatives in accordance with the requirements of the "informed consent" rules;
10. Have the skills to work with regulatory documents governing medical activities; understand the hierarchy of regulatory acts, starting with the main law - the Constitution of the Russian Federation;
11. Have the skill to analyze various options for legal relationships arising in professional medical activities (at the primary and subsequent stages of providing medical and social assistance) and make optimal legal decisions regarding them;
12. Possess skills in legal assessment of cases of improper provision of medical care (services) and other violations by medical personnel.

4.4 List of questions for the test

1. The diversity of theories of the origin of the state and law and the reasons for their emergence.
2. The concept and main characteristics of the state.
3. Features of forms of government and their types.
4. Forms of government, features of forms of government of modern states.
5. Forms of government.
6. Concept and types of state regimes.
